1 TECHNICAL SUMMARY

1.1 BRIEF DESCRIPTION

1.1.1 OVERVIEW

The OSD2254 is a 6-port industrial switch with redundant ring Gigabit Ethernet providing simple network management with real-time monitoring. It has four 10/100/1000Base-T RJ45 copper ports and two SFP ports for ring/bus configuration.

The OSD2254 incorporates redundant ring technology providing maximum reliability on critical networks. In the event of device or fiber failure the data path will automatically switch to a secondary path in less than 2ms per hop to maintain ring network integrity.

The unit will operate on either singlemode or multimode fiber. Operation over a network of hundreds of kilometers is possible by use of the appropriate optical devices. It normally requires two fibers but is optionally available for one fiber operation per port.

A major benefit of the OSD2254 is its reliable and consistent performance over the -20°C to +75°C temperature range that allows it to be used in uncontrolled environments such as roadside cabinets, mine sites and factories.

![FIGURE 1: OSD2254 TYPICAL RING CONFIGURATION](image-url)
1.1.2 APPLICATIONS

▲ Any network utilising a mix of copper and fiber
▲ Industrial IP communications
▲ Self-healing Gigabit Ethernet backbone networks
▲ Networks using Power over Ethernet devices such as cameras, intercoms, access control, telephones, etc.

1.1.3 FEATURES AND BENEFITS

▲ Complies with IEEE802.3i/802.3u/802.3ab 10/100/1000Base-T, IEEE802.3u, 100Base-Fx, IEEE802.3z 1000Base-Lx/Sx standards
▲ Has a total of six ports: four fixed copper ports for 10/100/1000Base-T and two SFP ports for the fiber ring or non-ring (100Base-Fx or 1000Base-X)
▲ A network diameter of hundreds of kilometers is practical
▲ Ring reconfiguration in the case of cable or switch failures takes less than two milliseconds per hop
▲ MDI/MDIX Crossover: no need for crossover cables
▲ Can be used with either singlemode or multimode fiber over a variety of link budgets
▲ Available for operation in Ring or point-to-point configuration
▲ Available for operation over 1 or 2 fibers
▲ Auto-Negotiation for half or full duplex operation
▲ Supports 10KB jumbo frames
▲ Powered by non-critical 10 to 36V DC or 24V AC supplies
▲ Operates over the temperature range of -20°C to +75°C
▲ OSDview Lite Network Management System
▲ Compatible with the OSD2244 or OSD2251 Gigabit Ethernet Switches.
▲ DIN rail Mounting
▲ SFP module sold separately

1.3 OSD2254 PORT ALLOCATION

**Front Panel:** There are four fixed copper ports for 10/100/1000Base-T and two SFP ports.

**Top Panel:** The top panel consists of a 4-way 5.08mm terminal block power connector and a 4-way 3.5mm terminal block alarm connector.

**Bottom Panel:** 8-way DIP switch, Micro USB connector and a Type-B USB connector.

Each section will be described further throughout this manual.

![Figure 2: OSD2254 Port Allocation](image)

**FIGURE 2: OSD2254 PORT ALLOCATION**
2 INSTALLATION AND OPERATION

2.1 INTRODUCTION

This section outlines the methods required to install and operate the OSD2254 successfully. It should be studied carefully if damage to the equipment or poor results are to be avoided. 
This equipment has been fully tested prior to dispatch and is ready for immediate operation. However it is advisable to check for external transportation damage before operation. If damage is evident, return the unit with the packaging to your supplier immediately.

2.2 INSTALLATION

2.2.1 WARNING AND PRECAUTIONS

▲ ELECTROMAGNETIC COMPATIBILITY

WARNING: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

▲ OPTICAL OUTPUT OPERATION

<table>
<thead>
<tr>
<th>Class 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>The OSD2254 is a Class 1 laser product.</td>
</tr>
</tbody>
</table>

PRECAUTIONS

▲ All service personnel should be provided training as to the hazards of direct viewing of laser radiation and of the precautionary measures during servicing of equipment

▲ Areas where laser products are installed should be restricted in access to trained service personnel only and appropriate warning signs posted in the work area.

▲ All laser apertures should be covered by protective covers when not connected to optical fibers. Never leave outputs uncovered.

▲ Laser equipment should be positioned above or below eye level where possible. Apertures should be positioned away from personnel.

▲ Protective eyewear should be worn in the vicinity of laser equipment.
2.2.2 OSD2254 DRAWINGS AND DIMENSIONS

The OSD2254 is designed to be wall mounted onto a DIN-Rail (35mm top hat) fixture. The unit dimensions (excluding connectors, SFPs, etc) is shown in Figure 3 below.

FIGURE 3: OSD2254 MOUNTING DIMENSIONS
2.2.3 LOCATION

As with any electrical devices, the OSD2254 should be placed where it will not be subjected to extreme temperatures, humidity, or electromagnetic interference. Specifically, the site selected should meet the following requirements:

- The ambient temperature should be between -20°C to 75°C.
- The relative humidity should be less than 95 percent, non-condensing.
- Surrounding electrical devices should not exceed the electromagnetic field (RFC) standards.
- Make sure that the switch receives adequate ventilation. Do not block the ventilation holes on any side of the switch.

Note: Without proper cooling and control (lowering) of ambient temperature, the components within the OSD2254 can be subject to increased heat shortening the longevity and reliability. It is thus good engineering practice to ensure the unit is installed in a well ventilated area.

2.2.4 POWER SUPPLY CONNECTIONS

The OSD2254 requires external power to the Redundant DC Terminal Block Power Connector located at the top of the unit. Always ensure that the power is off before any installation.

**Redundant DC Terminal Block Power Inputs**

There are two pairs of power inputs for use with redundant power sources. Only one power input is required to be connected to run the switch.

Step 1: Connect the DC power to the appropriate power source, connect the plug-able terminal block on the OSD2254 switch and then turn power on.
Step 2: Disconnect the power if you want to shut down the switch.

**TABLE 2: DC OR AC POWER CONNECTION**

</tbody>
</table>

Earth Ground Connection

**FIGURE 4: OSD2254 POWER SUPPLY CONNECTIONS**
2.2.5 OSD2254 ALARM CONNECTION

The OSD2254 has two monitoring alarm outputs: 1) Ring to Bus Alarm and 2) Temperature Alarm. The alarm connections and conditions for alarm outputs are as set out in Table 3. There are four pins on the 3.5mm terminal block used alarm output. Maximum ratings the OSD2254 relay can drive is 100mA @ 46V\(_{\text{max}}\). Note: Alarm output has no polarity.

<table>
<thead>

*Note: Bus alarm is only triggered after a ring connection is established.

**TABLE 3: ALARM CONNECTIONS**

**FIGURE 5: ALARM OUTPUTS**

**FIGURE 6: CONTACT CLOSURE OUTPUT**
2.2.6 USB CONNECTOR

The OSD2254 has a USB – Type B connector located on the bottom of the unit that is used for Command Line Interface (CLI) from the PC to the OSD2254 via the PC’s USB connector. See section 2.5 for further CLI information.

![USB Type B - CLI Port](image)

FIGURE 7: USB TYPE B CLI PORT

To operate and control the OSD2254 using the CLI an OSD2254 driver will be required to be installed onto the PC being used. The driver can be found on the included CD or on the OSD website. Please contact OSD sales if the driver cannot be found or installed. For Windows XP, Vista and Windows 7: CP210x_VCP_Win_XP_S2K3_Vista_7.exe. For Windows 2000: CP210x_VCP_Win2K.exe

Note: The unit requires a power cycle (Off/On) for any switch position change to take effect.
2.2.9 FITTING SFP CONNECTORS

Care should be taken when inserting/removing the SFP connectors from SFP port 3 and 4 as SFP modules are Electrostatic (ES) sensitive and Electrostatic Discharge (ESD) precautions should be taken when installing. Ensure that the SFP is fully engaged and latched into position.

**Inserting SFP** – Ensure that the SFP lever is in the locked position and insert into appropriate SFP port. Gently push the SFP until it locks into place. Remove plastic/rubber dust cap and fit fiber cable or RJ45 plug.

**Removing SFP** – Remove fiber connector or RJ45 plug. Pull the SFP lever down to unlock SFP from housing. Using the lever, gently pull the SFP out.

**FIGURE 12: FITTING/REMOVING SFP CONNECTORS**
2.3 OSD2254 OPERATION

When using the OSD2254 for the first time, check that the unit is in good condition with no visible damage.

Upon power up check that the indicators illuminate accordingly on power up (see Table 4).

2.3.1 CONNECTIONS

For RJ45 connection use Category 5 (CAT5) or higher. Length should be no more than 100 meters.

For singlemode fiber connections, fiber used must be 9/125µm singlemode fiber.

For multimode fiber connections, fiber used must be 50/125µm or 62/125µm multimode fiber.

Plug in the appropriate connectors for system configuration;

– RJ45 cable to fixed copper ports (port 1 and 2) and copper SFP modules
– LC or SC fiber cable to fiber SFP modules.

Redundant Ring Operation

The OSD2254 connected in a redundant ring topology providing maximum reliability on critical networks. In the event of device or fiber failure the data path will automatically switch to a secondary path in less than 2ms per node to maintain ring network integrity.
To connect the OSD2254 in a redundant ring configuration ports 5 and 6 must be used together with fiber SFPs. The non-ring ports (ports 1,2,3,4) should be used to connect to your Ethernet devices (eg. Cameras, PLCs, computers, etc.)

Figure 14 shows the connection method. Typically the SFP used would be a fiber SFP with duplex LC connectors. The dashed line indicates the closed loop, but more OSD2254 units can be connected to the ring as required using this topology. Ensure that the switch settings for port 5 and 6 are set to 1000Mbps (1Gbps) – see Table 5.

BUS OPERATION

To connect the OSD2254 in a bus configuration ports 5 and 6 must be used together with fiber SFPs. The remaining ports (ports 1,2,3,4) should be used to connect to your Ethernet devices (eg. Cameras, PLCs, computers, etc.)
2.4 TYPE-A USB PORT

The Micro USB Port is used for uploading firmware updates. All OSD2254 units will be shipped with the latest firmware already installed. This port has no function for end user.

FIGURE 16: OSD2254 MICRO USB CONNECTOR
2.5 COMMAND LINE INTERFACE

The Command Line Interface (CLI) is a useful tool for checking link status and debugging link connections. To enable the use of CLI the OSD2254 must be connected to a PC with a serial port and an appropriate cable as specified in section 2.2.6. Using a terminal emulation program such as Hyperterminal, a number of command lines specific to the OSD2254 can be implemented to check link/node status, ring/bus topology and enable/disable float backup.

2.5.1 TERMINAL EMULATION SETUP

Using a terminal emulation program such as hyperterminal the following parameters should be set up for correct command line operation. Select the appropriate “COM port” set up for the serial port.

FIGURE 17: SERIAL PORT SETTINGS
2.5.2 COMMAND LINE FUNCTIONS

There are a number of command line functions that enables the user to obtain running information of a single OSD2254 unit or the complete topology of the ring/bus network. This section explains the command lines and its functions.

When the terminal emulation program is operating, connect the USB cable to any one of the OSD2254 units on the ring/bus network – or alternatively, the OSD2254 unit which the user wishes to interrogate. Note: A message will be displayed on the terminal emulation program when the unit is powered after USB connection. This message will not open when the unit is switched on while plugging in the USB cable, however the command lines are functional.

The following table outlines the user available command line commands and their functions

<table>
<thead>
<tr>
<th>TERMINAL COMMAND LINE</th>

<td>Displays the current software version and revision installed on the unit</td>
<td>Figure 21</td>
</tr>
</tbody>
</table>
TOPOLOGY CHECK - <tc> Command Line

In this case, only one OSD2254 is connected to the USB cable. The display indicates the following:

No: 1 – Number of units connected on the ring/bus (in this case only one unit)

MAC_ADDRESS: 00:26:dc:22:51:25 – Displays all the MAC addresses of the units connected on the ring/bus

TOPOLOGY: Init – Displaying type of connection (in this case “Init” as there is only one unit)

NODE_ROLE: MASTER – Displays whether the unit is either the Master or Slave on the ring/bus (in this case only one unit is connected thus displaying master). The Master unit is determined by the unit with the lowest MAC address

PORT3: U_port. Indicates the function of port 3 and its relation to the ring/bus. There are four possibilities;
1. M_port – Master Port (port facing the master)
2. S_port – Slave Port (port back to the master)
3. B_Port – Backup Port
4. U_Port – Unconnected Port

PORT4: U_port. Indicates the function of port 4 and its relation to the ring/bus. There are four possibilities;
1. M_port – Master Port
2. S_port – Slave Port
3. B_Port – Backup Port
4. U_Port – Unconnected Port

<local: This points to the unit that the USB cable is plugged into on the ring/bus.

FIGURE 18: TOPOLOGY CHECK
In the example below there are four OSD2254 connected in a ring configuration.

**FIGURE 19: TOPOLOGY CHECK**

**No:** 4 – Four units connected

**MAC_ADDRESS:** Displaying all the MAC addresses of the units connected on the ring/bus

**TOPOLOGY:** Ring – Displaying type of connection.

**NODE_ROLE:** MASTER – Displays if the unit is either the Master or Slave on the ring/bus. Master is determined by the lowest MAC address

**PORT3:** U_port. Indicates the function of port 3 and its relation to the ring/bus. There are four possibilities:

1. M_port – Master Port
2. S_port – Slave Port
3. B_Port – Backup Port
4. U_Port – Unconnected Port

**PORT4:** U_port. Indicates the function of port 4 and its relation to the ring/bus. There are four possibilities:

1. M_port – Master Port
2. S_port – Slave Port
3. B_Port – Backup Port
4. U_Port – Unconnected Port

<-local: This points to the unit that the USB cable is plugged into on the ring/bus.
LOCAL NODE CHECK - `<lnc>` Command Line

This command line displays the running status of the local node that the USB cable is plugged into. The information provided is the MAC address, Topology, Node Role, Port Role and Float Backup status.

3 MAINTENANCE

3.1 INTRODUCTION

The following section outlines the fault-finding procedure for the OSD2254 modems. Please take note of the following:

▲ Personnel without appropriate training should not attempt any maintenance except that outlined below.

▲ If further maintenance is attempted you are warned that every care should be taken to ensure that internal measurements made while the equipment is operational are taken carefully as some components within the unit are expensive and may be damaged by failure of any portion of their support circuitry.

▲ Some components within the unit are Electrostatic (ES) sensitive and Electrostatic Discharge (ESD) precautions should be taken when performing maintenance upon the unit.

3.2 EXTERNAL INSPECTION

Visually check for the following:

▲ Check that the correct power source is connected to the power socket.

▲ Check that the Ethernet cables are connected to the modem correctly and that the distant OSD2254 modem has been connected correctly to any external equipment.

▲ Inspect the optical connectors (for fiber SFP option) for any contamination and clean using isopropyl alcohol and a lint free tissue if any contamination is detected.

3.3 ROUTINE MAINTENANCE

▲ There is no routine maintenance required with the OSD2254.
4  WARRANTY

Thank you for purchasing equipment designed, manufactured and serviced by Optical Systems Design (OSD). OSD warrants that at the time of shipment, its products are free from defects in material and workmanship and conforms to specifications. Our Warranty conditions are outlined below:

4.1  WARRANTY PERIOD

For warranty period, please contact your local OSD distributor.

4.2  REPAIRS

Optical Systems Design reserves the right to repair or replace faulty modules/units. Please obtain a “Return Material Authorisation” (RMA) form and number before returning goods. Goods must be returned in adequate packing material to Optical Systems Design, Warriewood or its nominated authorised representative, for all repairs.

4.2.1  WARRANTY REPAIRS

Return shipments to OSD shall be at customer’s expense and freight back to the customer will be at OSD expense.

4.2.2  OUT-OF-WARRANTY REPAIRS

OSD reserves the right to repair or replace any faulty goods. Freight costs and insurance for both journeys are met by the user. All equipment repaired by OSD will have a 3-Month Warranty from the date of dispatch.

4.2.3  SITE REPAIRS

By agreement site repairs may be undertaken for which out of pocket, hotel and travel expenses will be charged.

4.2.4  EXCLUSIONS

This warranty does not apply to defects caused by unauthorized modifications, misuse, abuse or transport damage to the equipment. All modifications to OSD’s standard product will need written authorization and will be charged at normal repair rates. All modifications are to be carried out by OSD Technicians. Warranty is void if unauthorized removal and/or tampering with serial number and/or repair labels is evident.
